

COMPANY PROFILE

BUSINESS EXPERIENCE

Have channelled 30 years experience in Dust Control Management. Operating in 8 different countries and managing 71 mines. Employ over 500 employees.

TOTAL MANAGEMENT SYSTEM

The Dust Control Management System consists of a range of environmentally friendly dust binding products, with a comprehensive stabilization and continuous maintenance programme.

EXPERTISE

The robust sealed haul road surfaces allow optimal production for haul trucks and other vehicles to operate safely in all weather conditions. This is achieved with greater fuel efficiency, safety, and mechanical wear. Water saving remains one of the biggest benefits in employing Dust-A-Side and in excess of 90% saving has been recorded on certain mines.

The company employs mine-site specific, dedicated and skilled personnel to build, maintain and manage the mine-site road surfaces and fugitive dust. The fugitive dust technology includes an innovative mist spray system, proprietary chemical application and qualified dust control maintenance.
