

ELB Press Release

ELB and ENFI announce African Partnership

Cape Town, 7 February 2017 - After many years of working together, ELB Engineering Services (ELB) and China ENFI Engineering Corporation (ENFI) are excited to announce their strategic partnership to tackle mineral and metal process projects, and associated infrastructure projects in Sub-Saharan Africa. This partnership combines the best in execution capability and process design for the full spectrum of mineral processing plants.

This partnership can be seen as a landmark development, in a time where the mining sector is undergoing disruption, in addressing the needs for innovation and world class competence.

“The partnership enables ELB to extend their current capabilities and offerings deep into the mineral and metal processing sector, as well as further enhance their infrastructure and power capability,” says Dr Stephen Meijers, CE ELB Engineering Services.

Mr Jiaming, Vice President of China ENFI Engineering Corporation stated that, “although they had done business in Africa, the partnership allows ENFI a greater execution capability in doing business in Africa.”

The market is in need of new technology, new ideas and a high level of competence to deliver world class solutions. Given the extensive African footprint that ELB has and the cutting edge technology from ENFI, the ELB/ENFI partnership believes they have a business solution unique for the African market.
