

What does the future hold?

Digital Mining and AI-based solutions for the Mining and Cement Industry

Increasing cost-efficiency is one of the biggest challenges in both the mining and the cement industry. Digitalization is the key to mastering these challenges – and our experts have been working hard to create solutions that use power of artificial intelligence to take transparency and efficiency to the next level.

In our free webinar you will learn more about:

- Modular digital solutions across all dimensions of mining applicable from single subsystems to life-of-mine
- Intelligent products and systems for the mining industry that allow you to add additional digital features
- SICEMENT® OPERATIONS, our AI-driven web-based platform for the cement industry
- Optimizing cement plant operation by combining real-time data with predictive intelligence

**Register today for the webinar
on Tuesday 15, 2022.**

To make it easier for you to attend in different
time zones, we are offering two timeslots:

**6:00 am CET for the Eastern hemisphere and
4:00 pm CET for the Western hemisphere.**
